

Readme

1. This Appendix presents the validation process with Laplace's equation for physical components of second- and third-order potential gradients in Tables A1 - A13.
2. In the following parts, the symbol "*" is omitted for simplicity.
3. Each of the following sections is independent by using the command **Clear["Global`*"]** to clear previous arguments.
4. After running all codes, the related results of Laplace's equation in Appendix B are obtained.
